HENDERSON'S VEGETABLE SEEDS

The Choice of Progressive Market Growers

All of the varieties listed in this catalog were bred and selected with one object in mind, and that is to produce profitable crops for the commercial grower. Our offerings include the most desirable types for the long distance shipper, as well as those that appeal primarily to the local market trade. Whether your market is far or near, Henderson's seeds produce the crops that bring good returns.

ARTICHOKE

GREEN GLOBE.

The most popular American variety of this delicacy. The flower bud is the portion of the plant used for food and is produced the second year after sowing the seed. The plants are tender and should be protected by a heavy mulch in sections having severe winters.

This outstanding rust-resistant variety was developed by the United States Department of Agriculture. It is without doubt the best variety in use today. The shoots are large, dark green, with a slight purplish tinge and of extra good quality.

BROCCOLI

HENDERSON'S RIVIERA.

An improved strain of the well known Italian Green Sprouting or Calabrese type. The plant is tall and branching. A large bluish-green flower bud head develops in the center. After this is removed, smaller heads are produced on the side branches. If the heads are kept cut the plants will continue to produce other heads for many weeks.

BRUSSELS SPROUTS

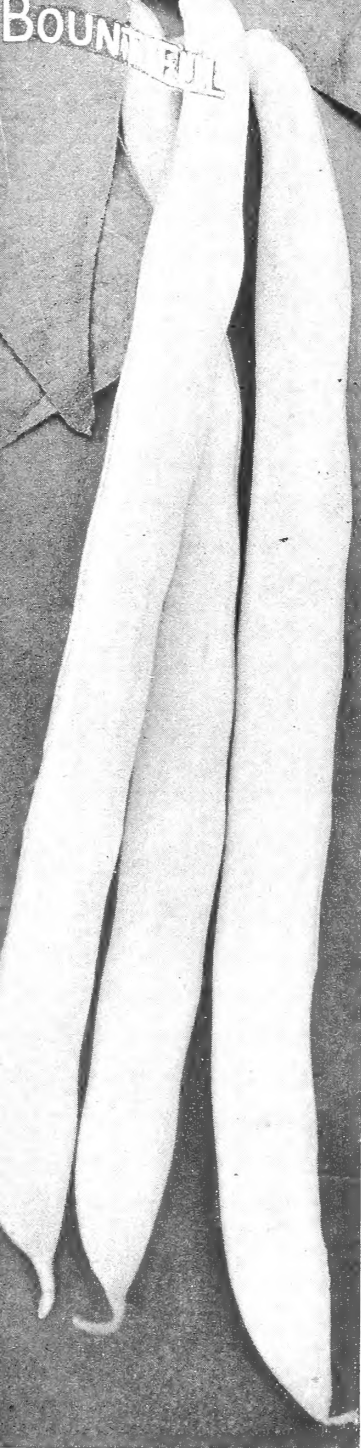

HENDERSON'S LONG ISLAND.

This is a special selection of the Long Island Improved type. The seed is produced on Long Island and is superior to ordinary strains in use today. The plant is dwarf, 20 to 24 inches tall. The sprouts or cabbage-like balls are about 1 1/2 inches in diameter, very solid, and are so closely set that the stem is completely covered.

YELLOWS RESISTANT VARIETIES

RESISTANT PREMIER (Extra Early).

Henderson's Premier Cabbage has always been popular with growers who want small compact plants for intensive cultivation. Now we have a "yellows" resistant strain that has retained the desirable characteristics of the original type. The plants are small, compact, with few outer leaves. The heads are medium small, round and although a few days later than the non-resistant strain, mature with exceptional uniformity.

	oz.	1/4 lb.	lb.	10 lbs.
Price	90c	\$2.75	\$9.00	\$85.00

RESISTANT GOLDEN ACRE (Extra Early).

This strain has proven highly resistant to "yellows" and has made it possible for growers to produce a good crop of early Cabbage in many areas infested with this disease. The heads closely resemble our strain of regular Golden Acre, but mature a day or two later.

	oz.	1/4 lb.	lb.	10 lbs.	25 lbs.
Price	70c	\$2.00	\$6.00	\$55.00	\$130.00

RESISTANT COPENHAGEN MARKET (Early).

MARION MARKET (Second Early).

A "yellows" resistant type of Copenhagen Market and one of the first resistant strains to be developed. Marion Market has proven very profitable for many growers because of its dependability and heavy yields even on yellows infected soil. The plants and heads are larger than Copenhagen Market and require about 10 days longer to mature. The heads are round, very solid and excellent for shipping.

HENDERSON'S SNOWBALL.

Excellent for Forcing—Dependable for Spring Crop—Unsurpassed for Fall Planting.

Market Growers the world over have used this strain year in and year out since it was first offered many years ago. We are continually receiving letters testifying to the dependability and general excellence of Henderson's Snowball. The widespread demand for this strain clearly indicates that it is adapted to the widest range of soil and climatic conditions of any variety of Cauliflower in existence.

The plants are of medium height, sturdy and vigorous. The outer leaves are of upright growth, while the inner one fold over in such a way that the "flowers" are completely protected until they have reached a good size. The heads are uniformly large, deep, very solid, snow white, and under normal growing conditions are entirely free from leafiness. Attractiveness and quality are unequalled.

SUPER SNOWBALL.

This is an extra early strain of the Snowball type. Besides being extra early, the heads or "flowers" mature with greater uniformity, making it possible to harvest a large percentage of the crop in the first cutting.

The plants are vigorous and strong. The leaves, especially the inner ones are well folded or curled over the heads. The heads are large, uniform in size, deep, and solid. They mature early and many times the entire crop is harvested before any heads of the later types are ready. One of the most profitable varieties for market.

EARLY SNOWWHITE (SPECIAL NO. 25). We are pleased to offer this new outstanding early variety. It has shown up well in our Cauliflower trials, and the commercial growers who have tried out this new type, are very enthusiastic about its merits. The plants are sturdy and somewhat taller growing than Primosnow. The inner leaves fold over the heads and overlap each other in such a way that added protection is given to the "flowers" until they are well developed. Even the outer leaves which are straight and upright, are inclined to curve inward at the tip.

The heads are large, of a uniform size, very deep, solid, exceptionally heavy, pure white, and of the highest quality. The well formed tight curd gives the heads a most attractive appearance. In season EARLY SNOWWHITE is a few days later than Primosnow but practically as uniform in maturity.

WHITE ROCK. There are so many stocks, good, bad and indifferent, of the well-known Erfurt Cauliflower that we have for years been looking for a strain that would be distinctly superior. We think we have now found one that is in a class by itself. Henderson's White Rock, while not being quite so early as Primosnow, is earlier than Erfurt and Snowball. The plant is particularly vigorous and produces a deep shaped, pure white head of superb quality, well covered and protected.

Henderson's Famous Snowball

HENDERSON'S PRIMOSNOW.

This outstanding extra early variety was introduced by us and is now recognized as the leading first early variety. The heads or "flowers" possess many of the characteristics of our famous Snowball—good form, good size, great depth, and a beautiful snow-white color, free from riciness or leafiness. The plant is sturdy; the foliage of fine form; the inner leaves being incurved give ample protection to the developing "flower". Primosnow is the earliest high quality Cauliflower that has ever been developed. It is ready to cut fully 8 to 10 days before such strains as Snowball or Erfurt and is of such uniform maturity, that practically the entire crop may be cut at one time. Highly recommended for market growers and shippers.

HENDERSON'S FAMOUS NEW YORK and IMPERIAL TYPES

NEW YORK (HENDERSON'S) also called WONDERFUL and CALIFORNIA ICEBERG.

We introduced this noted variety many years ago. It has been extensively grown in all sections of the country, and although not as popular today since the introduction of the earlier New York types, is still used in large quantities in many localities. The plants are large, with dark green outer leaves, which are slightly curled on the edges. The heads are large, very solid, well blanched, crisp, sweet, and are slow to run to seed. Our strain is noted for its uniformity and large sized heads.

	oz.	¼ lb.	lb.	10 lbs.	25 lbs.
Price	25c	75c	\$2.00	\$17.50	\$42.50

NEW YORK NO. 12.

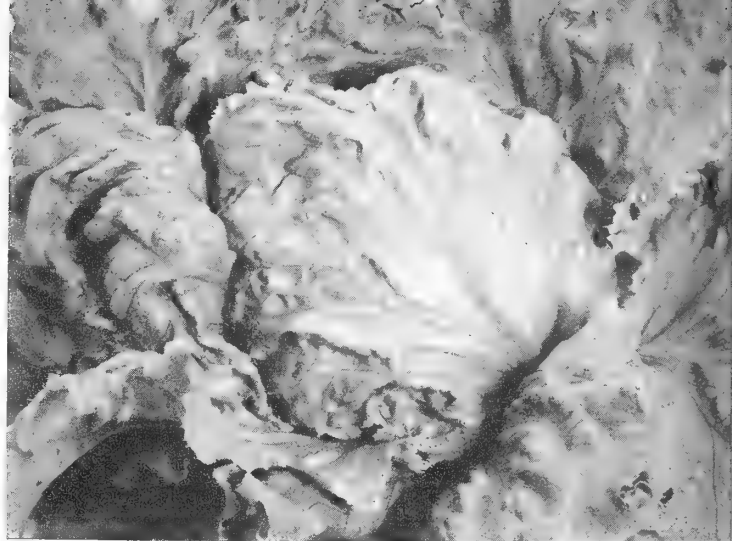

This is an earlier selection from Henderson's New York. It is very sure heading and better adapted to warm weather than the original type. The plants are compact with few outer leaves, and head with great uniformity. The heads are slightly flattened, solid, and of a large even size. The most dependable of the New York types, especially under varied growing conditions.

	oz.	¼ lb.	lb.	10 lbs.	25 lbs.
Price	30c	75c	\$2.25	\$20.00	\$49.00

NEW YORK NO. 515.

An early type of New York which in appearance resembles New York No. 12, but is a few days earlier and brighter green in color. The heads are well formed, solid and very attractive. It is also dependable in heading and well adapted to a wide range of soil and growing conditions. Highly recommended.

Price	30c	90c	\$2.50	\$22.50	\$55.00

New Lettuce, Imperial No. 847

IMPERIAL F.

One of the best of the older Imperial types. It somewhat resembles New York in its characteristics, but is several days later. The heads are large with few outside leaves which are dark green in color.

Price	35c	\$1.00	\$3.00	\$27.50	\$67.50

IMPERIAL NO. 44 (NEW).

This new Iceberg type was developed by Dr. I. C. Jagger of the U. S. Department of Agriculture. During 1936 and 1937 test plantings of Imperial No. 44 were made in various lettuce growing muck districts of the East. The variety looked so promising in these tests, that a commercial crop of seed is being produced this year for the first time. Although not extensively tried on upland soils, we believe it will be suitable there as well. Imperial No. 44 produces large, hard, well formed heads, uniform in size. In comparative test plantings, it has produced a good percentage of hard heads when nearby plantings of commercial strains proved worthless.

	oz.	¼ lb.
Price	75c	\$2.00 (Seed very scarce.)

IMPERIAL NO. 847.

(New). This new black seeded New York type has proven very satisfactory in many sections of the East. It is particularly well suited to upland soil. We have seen several commercial plantings that were so even in maturity that the entire crop was ready for cutting at one time. Plants medium large, with bright green leaves. Heads round, large, solid, crisp and of good quality.

Spinach sown in the late spring and summer has a habit of going to seed just when it should be ready for market. The leaf stems are very short, which so greatly reduces the size of the plant that it forms a compact, dense rosette, perfect in color and it occupies less room than any other variety.

HENDERSON'S NEW GIANT EARLY FLOWERING SPENCER SWEET PEAS

Bloom 4 Weeks Earlier Than the Late Spencers, Under Congenial Conditions Producing Profusely Immense Waved Flowers, "Fours" Predominating, on Long Stems

The plants of this new race are of strong constitution, vigorous growth and bloom continuously for about four months if grown under congenial conditions. Grown in the open ground they begin flowering in about 106 days from seed sowing or fully four weeks sooner than late flowering Sweet Peas sown at the same time.

It is predicted by Sweet Pea authorities that this race will supplant all other early and late flowering Sweet Peas for winter flowering under glass, and also for open ground culture in our Southern States—sown preferably in fall or winter.

THE IMPORTED SCOTCH CHAIN HARROW

Greenkeepers on Golf Courses
 Groundsmen on Athletic and Polo Fields
 Landscape Engineers, Contractors
 Gardeners and Farmers

All acclaim the **IMPORTED SCOTCH CHAIN HARROW** as the most valuable implement on the market for surface pulverizing and leveling. They say it is far superior to the average disc or tooth harrow, as it not only pulverizes the soil thoroughly, but also fills in all inequalities in the ground, thus insuring a smooth even surface for seeding grass or farm crops.

As the final surface smoother on grading jobs it is without an equal, for it obliterates all motive power marks completely. This implement has been in use for years on race tracks, driveways, etc., for smoothing out footprints and ruts.

The heavy links are fashioned by skilled workmen in Scotland from solid wrought iron and are therefore very durable. When not in use it may be rolled up very compactly, so as to occupy a minimum amount of storage space.

It is the result of years of experience and close study of American conditions and is undoubtedly the best for the American climate. By its use a deep green, velvety sward, free from clumps, can be produced in about four to six weeks' time.

The "Henderson" LAWN GRASS SEED is a carefully arranged combination of fine-leaved, dwarf Grasses, which are at their best during different months of the year, thus keeping a lawn constantly covered with enduring green. It is impossible to make a permanent lawn by sowing seed of a single variety, which will only grow vigorously for a portion of the year. Kentucky Blue Grass, for instance, which is sometimes exclusively recommended for lawns, requires two years to form a close sward, and also loses color in hot weather.

Our Special Mixtures for Special Purposes—There is a Henderson Grass Mixture for any and every location.

SHADY NOOK

The Ideal Mixture for Shaded Areas

On nearly all lawns there are unsightly bare spots under the shade of trees, which have baffled all efforts to get into Grass, but with this mixture there need be no further difficulty. It is a combination of fine, dwarf growing, evergreen varieties, which in their wild or natural state are to be found growing in the woods or other sheltered and shaded spots. Ground that has been densely shaded by trees is frequently "sour," and if the drainage is defective it is apt to be covered with moss and coarse Grasses. In such cases an application of slaked lime, at the rate of one hundred pounds to each thousand square feet, or two tons to the acre, is an excellent corrective and sweetener, but the moss should be first raked off.

TOUGH TURF

For Tennis Courts, Croquet Grounds, Bowling Greens, etc.

The turf required for outdoor sports must be closely interwoven, firm, elastic, smooth, and durable to stand the wear and tear. These requirements are met in this mixture, which is composed of fibrous, deep-rooting Grasses that spread and intermingle. The seeds are blended in the proper proportions to form and maintain a tough matted sward, constantly green, even in dry weather. These varieties of Grasses, being low-growing and fine-leaved, require to be sown liberally if a playing turf is desired quickly. This mixture has been used with great success at the Rumson Polo Fields, also at the Forest Hills Tennis Courts, the great sport centers for Tennis, and numerous other playing fields.

TERRACE SOD

This is a special mixture of Grasses best suited for sowing on terraces, embankments and hillsides; Grasses that produce long, strong, spreading roots, thus preventing heavy rains from washing them out; that will withstand drought, thrive on shallow soils, and at the same time produce a rich, velvety-green turf throughout the season.

SEASIDE

Our "Seaside" mixture will make a good turf of green on sand where the finer Grasses will not thrive, of course, the sand must be top-dressed with not less than 2 inches of soil before even our "Seaside" Grass Seed is sown, to enable the young Grass to get a start, after which the long roots—peculiar to the varieties we used in this mixture—drive down deeply in the sand and remain permanently self-sustaining, if attention is given to sprinkling during dry weather.

SPECIAL "BENT FORMULA"

A combination of the finest re-cleaned Grasses, using as a basis for this mixture the imported and domestic Bent Grasses which are so largely used in the finer Putting Greens of today.

A lawn seeded with this mixture and properly cared for will in truth make every lawn a Putting Green. On a lawn of this type, Clock Golf and other lawn games may be enjoyably played.

It is imperative in maintaining a lawn of this type, that the grass should be kept cut short and well rolled all through the season. Starvation of the grass plants is the most frequent cause of unsatisfactory lawns, and grass needs constant small applications of fertilizer and plenty of water to maintain a perfect lawn.
